Forecasting

FORECASTING

Write a Java program to implement a basic weather forecasting system using inheritance. Create a parent class called Forecast with attributes such as date and temperature. Then, create child classes such as SunnyForecast and RainyForecast that inherit from the Forecast class and have their own unique attributes and methods for predicting the weather.

PROGRAM EDITOR

Java

Run

Save

```
1 import java.util.*;
2
3 public class Main {
4     public static void main(String[] args) {
5         Scanner sc = new Scanner(System.in);
6
7         System.out.print("Enter date (e.g., 2026-08-13): ");
8         String date = sc.nextLine();
9
10        System.out.print("Enter temperature (°C): ");
11        double temp = sc.nextDouble();
12
13        sc.nextLine(); // consume newline
14
15        System.out.print("Choose forecast type (1 = Sunny, 2 = Rain): ");
16        int choice = sc.nextInt();
17
18        if (choice == 1) {
19            System.out.print("Enter sunlight hours: ");
20            double hours = sc.nextDouble();
21            SunnvForecast sunnv = new SunnvForecast(date, temp, hours);
22        }
23    }
24 }
```

OUTPUT

System Error: Could not reach compiler or server error occurred.
