Games

GAMES

Write a Java program to implement a basic game system using inheritance. Create a parent class called Game with attributes such as title and genre. Then, create child classes such as ActionGame and PuzzleGame that inherit from the Game class and have their own unique attributes and methods for playing the game.

PROGRAM EDITOR

Java

Run

Save

```
1 public class Main {
2     public static void main(String[] args) {
3         // Creating objects of child classes
4         ActionGame action = new ActionGame("Shadow Runner", "Action");
5         PuzzleGame puzzle = new PuzzleGame("Brain Quest", "Puzzle");
6
7         System.out.println("=== Action Game Details ===");
8         action.displayDetails();
9         action.displayActionInfo();
10        action.play();
11
12        System.out.println("\n=== Puzzle Game Details ===");
13        puzzle.displayDetails();
14        puzzle.displayPuzzleInfo();
15        puzzle.play();
16    }
17 }
18
19 // Parent class
20 class Game {
21     protected String title;
```
