Overloading

OVERLOADING

Write a Java program to demonstrate method overloading with variable arguments. Create a method called `sum()` that takes in a variable number of integers and returns their sum. Then, create an overloaded version of the `sum()` method that takes in a variable number of doubles and returns their sum.

PROGRAM EDITOR

Java

Run

Save

```
1 public class Main {  
2  
3     // Method to sum a variable number of integers  
4     public static int sum(int... numbers) {  
5         int total = 0;  
6         for (int num : numbers) {  
7             total += num;  
8         }  
9         return total;  
10    }  
11  
12    // Overloaded method to sum a variable number of doubles  
13    public static double sum(double... numbers) {  
14        double total = 0.0;  
15        for (double num : numbers) {  
16            total += num;  
17        }  
18        return total;  
19    }  
20  
21    public static void main(String[] args) {
```
