University

UNIVERSITY

Write a Java program to implement a basic university management system using inheritance. Create a parent class called Person with attributes such as name and age. Then, create child classes such as Student and Professor that inherit from the Person class and have their own unique attributes and methods for managing coursework and teaching classes.

PROGRAM EDITOR

Java

Run

Save

```
1 public class Main {
2     public static void main(String[] args) {
3         // Creating a Student object
4         Student student = new Student("Ramya", 20, "S12345", "Comp
5
6         // Creating a Professor object
7         Professor professor = new Professor("Dr. Smith", 45, "P6789
8
9         System.out.println("--- Student Information ---");
10        student.displayPersonInfo();
11        student.manageCoursework();
12
13        System.out.println("\n--- Professor Information ---");
14        professor.displayPersonInfo();
15        professor.teachClass();
16    }
17 }
18
19 class Person {
20     protected String name;
21 }
```
