### QUESTIONS

8 / 8 completed

Pool

### POOL

Write a Java program to create a thread pool that can execute multiple threads concurrently.

**PROGRAM EDITOR**

Java

Run

Save

```
1 import java.util.concurrent.ExecutorService;
2 import java.util.concurrent.Executors;
3
4 public class ThreadPoolDemo {
5     public static void main(String[] args) {
6         // Create a thread pool with a fixed number of worker th
7         ExecutorService pool = Executors.newFixedThreadPool(4);
8
9         // Submit multiple tasks to be executed concurrently
10        for (int i = 1; i <= 8; i++) {
11            final int taskId = i;
12            pool.execute(() -> {
13                System.out.println("Task " + taskId + " started
14
15                // Simulate some work
16                try {
17                    Thread.sleep(500);
18                } catch (InterruptedException e) {
19                    Thread.currentThread().interrupt();
20                }
21
```
