QUESTIONS

8 / 8 completed

Logger

LOGGER

You are working on a project that requires the use of a logging framework. Write a Java program to create an interface called "Logger" with methods for logging different types of messages, such as "debug", "info", "warning", and "error". Implement the interface in a class called "Log4jLogger" that uses the Log4j logging framework.

PROGRAM EDITOR

Java

Run

Save

```
1 class Main {
2     public static void main(String[] args) {
3         // Instantiate the logger implementation
4         Logger myLogger = new Log4jLogger();
5
6         // Demonstrating the use of the "logging framework" simulation
7         myLogger.debug("System initialization started...");
8         myLogger.info("User logged in successfully.");
9         myLogger.warning("Disk space is running low!");
10        myLogger.error("Failed to connect to the database.");
11    }
12 }
13
14 // The interface defining the logging framework structure
15 interface Logger {
16     void debug(String message);
17     void info(String message);
18     void warning(String message);
19     void error(String message);
20 }
21
```

OUTPUT

Compilation Error:

C:\Windows\TEMP\sandbox_192311149RA_6a7e9ae27d55c6.19014802\is.

java:2: error: class Main is public, should be declared in a
file named Main.java

```
public class Main {
```
